Water Refining Company Inc.
A+ Better Business Bureau
The Most Trusted Name for Aerator Systems

Sulfur Aeration Technology. No chlorine. Well water enters the Aerator Tank from your existing well pump and pressure tank. The Aeration manifold scrubs, oxidizes, and aerates (mixing of air and water), and the Sulfur Gas is vented outside to the atmosphere.

Also, installed vertically inside the Aerator Tank is a submersible pump needed to re-pressurize the water supplying the home or building. A companion pressure tank is included for the Aerator submersible pump. The System is fully automatic with refilling and shutoff controls.

OUTDOOR SULFUR AERATOR SYSTEM

Rectangular Aeration Spray Manifold consisting of six (6) patent pending sulfur aeration nozzles.

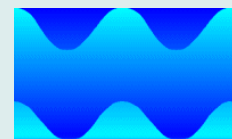

Each aeration nozzle produces a spiral double cone of spray, a spiral inner cone of spray within a spiral outer cone of spray. This patent pending spray action doubles the aeration process.
